GEIST™ FLOOD SENSOR

 VERTIV

Part Number:
FS

Description
0-5 VDC conductivity-based flood sensor used to detect the presence of water.

NOTE: If the Geist environmental monitoring device does not have analog/ dry contact inputs, the Geist A2D analog-to-digital converter can be utilized for conversion to an RJ12 sensor port.

GEIST™ FLOOD SENSOR

VERTIV.

Installation

1. Place the plastic enclosure anywhere in the data center where there is a potential accumulation of water.

2. Connect the flood sensor to the analog/dry contact inputs of the Geist device by attaching the common wire to terminal C and the remaining wire to terminal 1.
